„In this age of specialization, most young scholars grow up with experience gained only in one or two fields of research; contact may be made with neighbouring areas, but the tendency is to call in the specialist if anything other than a passing contact is needed... The four volumes under review, covering his collected works, contain no fewer than 167 scientific papers and articles that have emerged from his pen; and they demonstrate, perhaps above all else, how versatile was his knowledge and command of mathematics — both in its own right and in relation to science and to life generally... It is perhaps fitting, in concluding this review, to record a comment on Hermann Weyl himself. There is none more appropriate than that by K. Chandrasekharan, the editor of the collected works. It is as follows: 'The name of Hermann Weyl is enshrined in the history of mathematics. A thinker of exceptional depth, and a creator of ideas, Weyl possessed an intellect which ranged far and wide over the realm of mathematics, and beyond. His mind was sharp and quick, his vision clear and penetrating. Whatever he touched he adorned. His personality was suffused with humanity and compassion, and a keen aesthetic sensibility. Its fullness radiated charm. He was young at heart to the end.'"

Who produces scientific
information services that are

**MULTIDISCIPLINARY
CURRENT
ECONOMICAL
EASY TO USE
HIGHLY EFFECTIVE?**

The Institute for Scientific Information. Expert at providing researchers and scholars in nearly every scientific and technical discipline with the journal information they need. When they need it. Economically.

We do.

ISI literally makes the world's scientific literature work for you. To upgrade your research. To save you and your organization time and money. And to improve your professional performance and standing.

ISI now covers more than 4,000 key journals. We cover them quickly and completely. And we retrieve the material they contain better than anybody else.

Our information services are now sixteen in number. For full details, send for a free copy of our new brochure.
